Hospital Appointment System Report

Student Roll No: D25DIT097-A

Tech Stack: React + Express + MongoDB

System Name: MedCare Plus Hospital System

Date: August 20, 2026

Screenshot 1 — React Application

Demonstrates the Hospital Appointment System frontend running in the browser (React + Vite on <http://localhost:5173>). Shows navigation links, dashboard metrics, and status-styled appointment cards (confirmed, pending, cancelled).

Screenshot 2 — REST API Execution

Demonstrates a successful REST API request to the Express backend (GET <http://localhost:5000/api/v1/doctors>) returning HTTP status 200 OK and structured JSON data output.

Screenshot 3 — MongoDB Database & Documents

Demonstrates MongoDB Compass displaying the hospital_system database, appointments collection, and document schema fields (patientId, doctorId, status, timeSlot, date, reason).

MongoDB Compass — hospital_system Database

DATABASES

- ▼ hospital_system
 - appointments (3)
 - doctors (4)
 - patients (1)

Collection: hospital_system.appointments

(status: [\$in ['confirmed', 'pending']])

FIND

_id: ObjectId('66c4a200e8f12a001a9b40102')

patientName: 'John Doe'
doctorName: 'Dr. Sarah Jenkins'
